

What is ESTA® Kieserit?

ESTA® Kieserit is a sulphate based magnesium and sulphur fertiliser with 25% MgO and 50% SO₃. It is mined from natural salt deposits in Europe which were formed by the evaporation of seawater many millions of years ago.

Why use ESTA® Kieserit?

- ✓ ESTA® Kieserit contains the nutrients magnesium and sulphur in a water-soluble immediately plant available form
- ✓ ESTA® Kieserit is an efficient Mg and S source for all crops in all types of soil regardless of soil pH.
- ✓ ESTA® Kieserit has excellent spreading properties due to ideal particle size distribution and granule hardness
- ✓ ESTA® Kieserit has also been certified by the Soil Association (UK) for use in organic farming systems

How does ESTA® Kieserit compare to synthetic magnesium sulphates?

ESTA® Kieserit	Synthetic magnesium sulphate
✓ 100% water soluble magnesium	✗ Typically only 80-85% of the magnesium is water soluble
✓ 100% of sulphur available to the crop	✗ Typically 10% less sulphur availability
✓ Crop access to all the nutrient you are paying for	✗ On a nutrient value, 24% cheaper to account for the nutrient the crop cannot access
✓ Very low levels of heavy metal content	✗ >97% higher aluminium and iron heavy metal content than ESTA® Kieserit, giving high levels of toxicity

Where can I buy ESTA® Kieserit?

Ask your Origin Fertilisers contact for ESTA® Kieserit.
