

TRIAL DATA SHEET

SWEETGRASS

Objective: Can Sweetgrass offset a 15% reduction in mineral N application compared to CAN as measured by dry matter yield and forage quality?

Crop: Grass

Location: Farm, Mayo

Date: 2022

Researcher: Internal Origin & Goudings trials staff

Trial code: N15(1)/2022

Background:

Site: pH 6.2, P index 3, K index 2-

Treatment 1: CAN (27 N); total N applied was 304 kg/ha

Treatment 2: Sweetgrass (23 N + 5 SO₃ + 5 Na₂O); total N applied was 259 kg/ha, ie 14.8% less than CAN

Results: Farm trial, Mayo, 2022 DM yield at reduced N rate

Conclusions:

At 15% less total N compared to straight CAN, Sweetgrass:

- ✓ Increased DM yield by 0.663 mt per ha (+ 8.9%)
- ✓ Additional DM is worth £119 per ha (based on DM value of purchased concentrate at £180 per tonne)
- ✓ Increased N uptake, nitrogen use efficiency, DM content, crude protein, digestibility and energy
- ✓ Sweetgrass reduced greenhouse gas emissions by 14.8%
